CHALMERS

Clock It

A Vietnam supplier pilot for IKEA

Sustainable Digitalization In Practice · Team 4

Ella Linlökken (ellalinl) · Emil Ström (emilstro) · Ghazal Davari (ghazald)

Hugo Dörrich (hugodor) · Pontus Gustafsson (pontg) · Raghib Hussain (raghib)

Why audits alone are not enough

01

Hidden issues

Overtime, unsafe conditions, delayed wages

02

Fear of reporting

Fear of consequences can silence honest feedback

03

Trusted worker insight

Identify patterns earlier and act sooner

Clock It

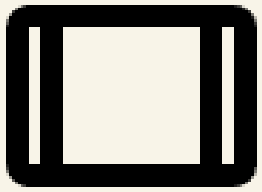

Connecting workers' voices with IKEA's decisions

Workers

Share concerns safely and voluntarily

→

Clock It

Worker feedback at clock-out

→

IKEA

Identify risks and follow up

Social Dimension

- Gives workers a voice
- Strengthen trust and communication

Economic Dimension

- Better working conditions -> more productivity

- Small costs

The gap is not data

01

Signals exist

Audits, supplier reports and worker concerns can all reveal labour risks.

02

Context gets lost

When information sits in separate channels, recurring issues are harder to compare across sites and time.

03

Action is hard to track

IKEA needs a protected place to assign a case, follow the response and verify whether conditions improve.

Privacy and operating assumptions

Pilot scope

No personal identifier, biometric record, or individual clock-out timestamp is attached to feedback.

Open questions

Local law, retention, urgent incidents, physical privacy, and supplier consent need specialist review.

Sustainability dimension

- **Increased agency**
- **Strengthen trust and communication**
- **Economically sound solution**

Technical Dimension

- Maintained by IKEA, suppliers and clock-in system provider
- Challenges: technical failures, cybersecurity and scaling
- Modular feedback feature

Environmental Dimension

- Low energy and storage needs

- Refurbished tablets and recycling

Individual Dimension

- Direct Access
- Zero Traceability
- Retaliation-Free
- Actionable Change

Order of Effects

- Immediate effects
- Enabling effects
- Structural effects

Demo

From data to action

- Identify trends
- Detect risks
- Improve sustainability
